

Are you seeing your GP or Physiotherapist for the first time because of joint or muscle pain ?

OR

Are you a family member (mother, father, sister, brother or child over 16) of someone with Rheumatoid Arthritis?

Some people with rheumatoid arthritis have antibodies in their blood called Anti-Cyclic citrullinated Peptide (CCP) Antibodies.

Professor Paul Emery and his team are interested to find out if people with joint pain and family members of patients with rheumatoid arthritis also have these antibodies – this can be found out by doing a simple blood test.

If you are interested in receiving an information pack which gives details of how you can help us with this vital research please get in touch with our research nurse team.

Telephone (0113) 392 4734

Or
